Description

Vertical centrifugal pump with bracket ADV 155 is made of thermoplastic materials (PP and PVDF) and are suitable to pump high corrosive liquids with solids. Pump series ADV are available with different column lengths from 500 mm to 2000 mm.

The open impeller allows pumping even with very dirty liquids having viscosity of up to 500 cps (at 20°C) and small suspended solids.

ADV 155 vertical centrifugal pump consists of a solid pump casing and a column fitted to the base plate supporting the lantern that in turn supports the electric motor. The direct-drive motor is connected by a flexible coupling on the pump shaft. The open impeller is fitted to the other end of the shaft that is supported by a radial bearing. This pump's special design allows the motor to be stripped without the need to disconnect the pump from the system

Installation

ADV Vertical centrifugal pumps should only be installed with the shaft positioned vertically and the pump immersed in the tank. Suitable devices should be fitted to avoid dry running and /or the formation of a vortex and possible air suction. These pumps should only operate whilst filled. Running dry or with air bubbles can cause damage to the internal bushing
